A Bird's Eye View of the Hill Nursery, at Dundee, Ill.

## Price List of Hill's Choice Stock

### FOR FORESTRY PLANTING

We are in position to grow Evergreen and deciduous tree seedlings in immense quantities at very reasonable prices, to be furnished for reforestation projects. Those who wish to undertake a reforestation program on a large scale, will do well to get our prices for stock grown on contract.

Now is the time to make your arrangements for Spring shipments. We will be very glad to furnish samples to any one interested.

### Evergreen Seedlings

	Per 100	Per 100	10,000 Per M	100,000 Per M
--	------------	------------	-----------------	------------------

#### Abies Douglassi (Douglas Fir) Colorado Variety

Our plants are the type from Northern Colorado, the seed being collected in deep gorges of high altitudes where the blue and silvery foliage is characteristic, being compact and symmetrical in growth, with rather short needles, in contrast to Southern Colorado and New Mexico type which are of doubtful hardness, irregular and open growing. This tree was originally discovered by Archibald Menzies, 1792, and re-discovered by David Douglas, the eminent Scotch explorer in 1827 and introduced by him in the following year. It was shortly after named for him to commemorate his memory. A tree that is widely known and appreciated in both Europe and America.

4-6 inch 3 yr. From Seedling Beds	\$3.50	\$20.00	\$17.00	\$15.00
6-8 " 3 yr. " " " "	4.00	25.00	-----	-----

#### Juniperus Virginiana (Red Cedar)

Our stock is the hardy Northern strain adapted for planting in all sections of the country. The propagation of this valuable Conifer has been a specialty with us for many years and we exercise great care in the selection of our strain of seed.

4-6 inch 2 yr. From Seedling Beds	3.00	20.00	17.00	14.00
6-8 " 3 yr. " " " "	4.00	25.00	22.00	18.00

#### Larix Europea (European Larch)

The European Larch is a deciduous Conifer, similar in form and size to our native Tamarack. The good qualities of the Larch have been proved by long experience and it is now looked upon by many as almost a native tree. It affords excellent material for fencing when young and for building purposes when older. We obtain our seed from Scotland where the best type is found.

10-12 inch 2 yr. From Seedling Beds	3.50	20.00	17.00	14.00
-------------------------------------	------	-------	-------	-------

#### Picea Alba (White Spruce)

Described by Bailey, the eminent horticulturist, as "A Native of the Northern Parts of America." Derives the name White Spruce due to its light frosty green foliage, slightly tinged with blue. Thrives to the best advantage in the colder climates, north of Philadelphia or St. Louis. Although native throughout a wide range, the best types prevail throughout Northern Wisconsin, from where our seed is gathered from carefully selected grounds.

2-4 inch 2 yr. From Seedling Beds	3.00	20.00	17.00	14.00
4-6 " 3 yr. " " " "	4.00	25.00	22.00	18.00

#### Picea Excelsa (Norway Spruce)

We are growers on the very largest scale of this popular fast growing Evergreen. Seedlings are produced in million lots and our annual transplantings now exceed over 500,000 plants every year. As the Norway Spruce prevails over a wide range of territory in Europe, there are naturally many sources from which to obtain seed. Our careful experiments and close study of this situation for many years has proven conclusively that seed from French and German sources are unreliable for North American conditions. The French and German seed is easily obtainable and low in price, usually from 75c to \$1.00 per pound, but the really superior type of Norway Spruce exactly suited to North American conditions comes from high elevations in the Swiss Alps and is always scarce and high in price, usually costing from \$4.00 to \$6.00 per pound. The exclusive use of this seed by us insures a really superior type of Norway Spruce exactly suited to North American conditions.

4-6 inch 3 yr. From Seedling Beds	2.85	13.50	10.00	8.50
6-8 " 3 yr. " " " "	3.00	16.50	12.00	10.00
8-10 " 4 yr. " " " "	3.50	20.00	17.00	12.00

#### Picea Canadensis (Black Hill Spruce)

Somewhat similar and closely related to White Spruce, but much more symmetrical, compact and bushy. Hardest of all Spruces. A native of the Black Hills of South Dakota and first introduced into commercial culture by Mr. D. Hill many years ago, since which time it has been fully tested in all parts of the country and found satisfactory. Foliage varies from green to bluish tint. Found entirely satisfactory north of St. Louis and Philadelphia.

4-6 inch 3 yr. From Seedling Beds	5.00	35.00	30.00	-----
-----------------------------------	------	-------	-------	-------

#### Picea Pungens (Colorado Blue Spruce)

This tree is a native of the Rocky Mountains. It is very hardy and well suited for positions which are too damp for the common spruce. Owing to the beauty of its foliage it is highly ornamental as a park tree. This handsome Spruce was discovered on Pikes Peak, by Dr. Parry in 1862.

4-6 inch 3 yr. From Seedling Beds	5.25	37.50	30.00	-----
-----------------------------------	------	-------	-------	-------

#### Pinus Austriaca (Austrian Pine)

Is sometimes called Black Pine. Has rich, glossy, dark green foliage. Well adapted for planting in cities, as it is highly resistant to smoke. Its native home is in the lower provinces of Austria and also the Northern half of the Balkan Peninsula. A fast growing, dense tree of wonderful adaptability. For years we have secured our seeds from original sources in Austria, but since the war are now using carefully selected home grown seed which has proven as satisfactory or even more so than the imported seed. It is a sparse tap-rooted Pine, but transplants quiet satisfactorily if moved late in the Fall or early Spring.
